

Choose and use appropriate standard units to estimate and measure length/height in any direction (m/cm);

Andy the Alien has landed on earth and wants to measure mass, length and time but has no idea what humans on earth use to do this. Can you help him?

What you are measuring

The mass of a book.

The width of the table.

The time taken to run
a race

The length of the
pencil

What would you measure it with?

Why would you choose that?
